PULSES

OUR PRODUCTS

CHANADAL

Among the various range of pulses that we deal in, chana dal has been widely acclaimed due to its tasteful flavour. We export chanadal which is cleaned and processed before packing and transporting. Only the best of grains of pulses are selected and processed to the clients so that the taste of the food can remain authentic

URADDAL

urad dal retains the skin and also has a strong flavour. Skinned and split urad dal is creamy white and somewhat bland. Our pulses are well processed and adhere to the highest standards of quality. We provide multiple packaging options. The urad majorly comes in two types that is black and white. Whole urad dal derives their strong, earthy flavor from the black skins and are often used in curries. Split urad dal retains the skins and also has a strong flavor. Skinned and split urad dal are creamy white and somewhat bland.

MOONGDAL

These moong whole pulses have good nutritious value and are available in various types. we offer a premium quality Toor Dal. Moong beans are a high source of nutrients including: manganese, potassium, magnesium, folate, copper, zinc and various B vitamins. They are also a very filling food, high in protein, resistant starch and dietary fiber.

BLACK CHANA

This chana is widely used for making chana masala, curries, subzis, pulaos, snacks etc. Offered chana is cleaned and processed . Like other beans, kala chana is full of protein, fiber and iron, and makes a healthy and colorful addition to any meal.

CHICK PEAS

Chickpeas are such a versatile ingredient. You can roast chickpeas and add them to salads, use them as a substitute for croutons in soups, or turn them into a simple snack with big flakes of sea salt.

FAAZ AGRICULTURE
PRIVATE LIMITED

Our
company's
Mission is to
satisfy the
customer needs

VISION & MISSION

Our
Company's
Visions are:

- Excellent Quality.
- Lowest Price.
- Delivery on time
- Customer Satisfaction

R&D

We believe in continual improvement to achieve the quality. We provide training to our staff to maintain the quality.

Processing Methodology

Food Processing and Technology includes a set of physical, chemical or microbiological methods and techniques used to transmute raw ingredients into food and its transformation into other forms in food processing industry. The major factors that we consider in processing include:

- The processing steps typically used to manufacture a product's ingredient themselves
- The origin of the ingredients
- The sum of processes likely used to manufacture a given product based on the ingredients listed

on the product label. These factors are weighted based on the extent to which they are likely to alter the food's nature or nutritional content and then combined to determine a product's overall processing score. For the individual ingredient scores, both the source of the ingredient and the processes used to manufacture it are taken into consideration

Quality Management

We maintain high quality of products.

In food and feed manufacturing, properties such as protein, oil and sugar are significant, the high germination percentage (viability of seed) and seed dormancy is the important feature we consider, for consumers the properties like color and flavor will be important.

We consider both extrinsic and intrinsic factors. The intrinsic factors of grain includes, color, composition, bulk density, odor, aroma, size and shape. We maintain size, color, composition and shape of the grain which is an important factor in grain quality, grading, trade, and processing of grain. The extrinsic factors include: age, broken grain, immature grain, foreign matter, infected grain, moisture content etc.

Product Safety Systems

It is necessary to remove dust and contaminants, which can include insects, and vegetable material, such as bits of straw and chaff and weed seeds. These will fill up pore spaces within the crop, inhibiting air movement and adding to any possible spoilage problems. We ensure that our products are clean and free from all these type of contaminants. Our products undergo drying process that reduces grain moisture content to a safe level for storage. Our products are protected from insects, rodents and birds by allowing proper storage hygiene. We remove the husk, and produce an edible, rice grain that is sufficiently milled and free of impurities.
